GPT Prompts

1

Your project is an artificial intelligence program required to review a C++ application based on the Simple and Fast Multimedia Library (SFML). Read the instructions and the rubrics and evaluate the project carefully. The following factors are some of the factors to consider when evaluating:

Once you have assessed the project using these criteria, mark accordingly based on the rubric given alongside explaining the mark with particular examples of the project.

link:<https://chat.deepseek.com/share/xghco2zurmesagc5h2>

2

Create a C++ program with SFML which captures the position of a mouse click on the screen. This must have the following specifications.

Function Signature:.

```
sf::Vector2i getMouseClickedCoordinates(sf::RenderWindow window);
```

Description:.

The function uses a pointer to sf::RenderWindow as an input and verifies whether a single mouse click has taken place in the window or not. In case yes, It must deliver coordinates in the shape of sf::Vector2i object.

Implementation Steps:.

sf::Event:: MouseButton Pressed is an event to use event loop.

On clicking on a mouse button, you could get the position of the mouse with the help of the following: sf::Mouse::getPosition(window).

Position XY on a plane Giving back no position on XY Plane.

Error Handling:.

Before making a call to GetMousePosition make sure that you are dealing with an event that pertains to the clicking of a mouse button.

Address any distractions that can occur during the process of polling an event.

Example Usage:.

Give a simple example on how this function can be used in an SFML application. This must contain all the window starting up as will be required, invoking the function when a mouse is clicked and displaying the coordinates.

3

You are a code commenting assistant who is assigned with the role of writing clear and concise comments on the given code. Your remarks must make reading and comprehension easier to a group of developers who might be working on the code in pairs.

Output format: The original code should be given back but it should be accompanied by comments as per the instruction above.

4

Trace the following code, identifying logical errors. Break down the code step by step, pointing out any possible logic, flow or structure errors that may cause erroneous actions. Possessing each of the identified mistakes identified, justify why it is an issue and provide a fixed variant or an alternative variant. The code of analysis is as follows:

Do not forget to be detailed in your analysis and provide particular examples of the code to prove every point.

Discuss the given PDF document in detail.

Prepare a unified summary of the document that summarizes the nature of the document to make it readable and easy to understand by the people who have not read the contents in the document.

Also, in case there are references or citations in the document, summarize what they mean regarding the major themes.
